(a) F_1, $\alpha = 0.2$, below the wall: 2 fibres, 4 objects
(b) F_1, $\alpha = 0.6$, above the wall: 1 fibre, 4 objects
(c) the 2×3 example: 3 fibres, 5 objects
(d) one count later: 2 fibres, 5 objects
u_1
u_2
$x = \alpha_{11}$
$y = \alpha_{12}$
positive object (the probabilistic one)
real object with a negative coordinate
complex object
its torus fibre $L(u)$
