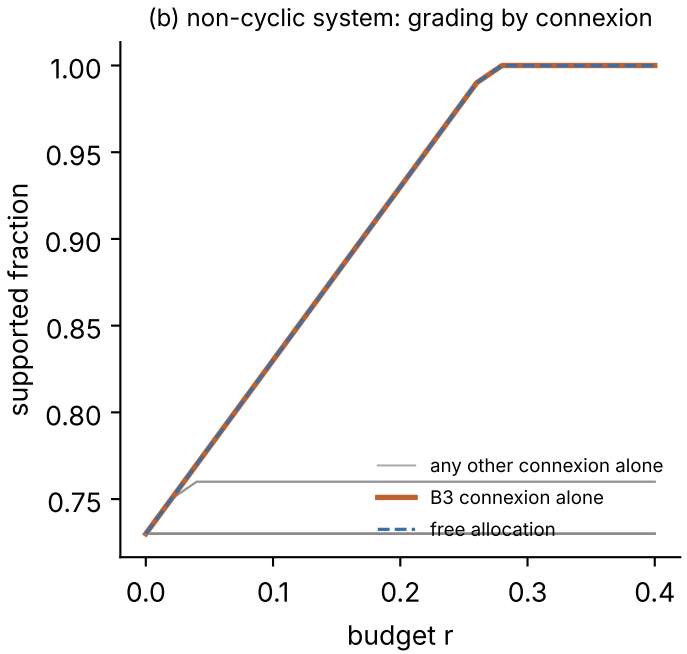
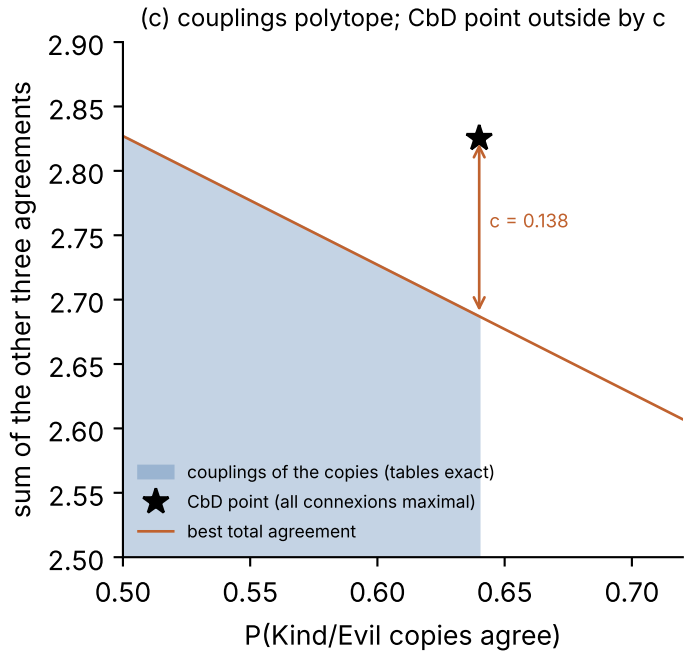
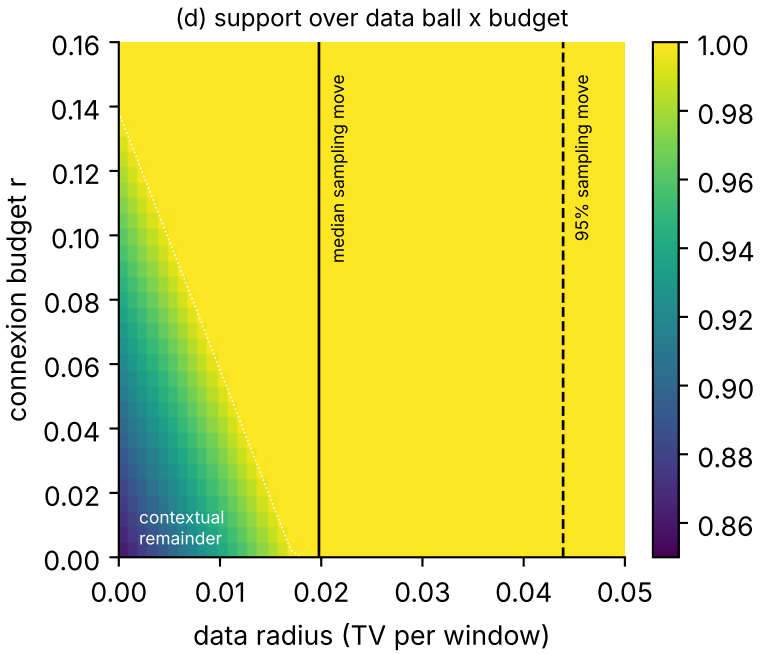
(a) Snow Queen: support vs budget
supported fraction
connexion budget r
r = c = 0.138
data radius 0.0
data radius 0.008
data radius 0.016



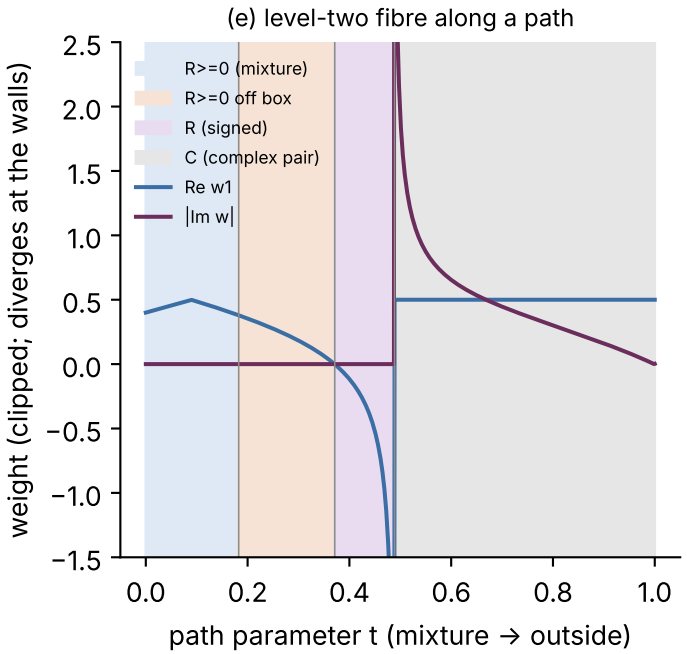
(b) non-cyclic system: grading by connexion
supported fraction
budget r
any other connexion alone
B3 connexion alone
free allocation



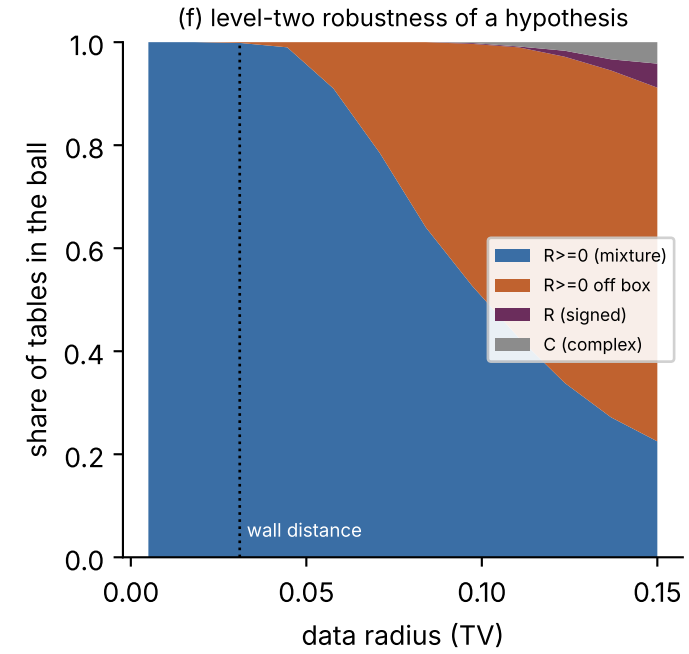
(c) couplings polytope; CbD point outside by c
sum of the other three agreements
P(Kind/Evil copies agree)
c = 0.138
couplings of the copies (tables exact)
CbD point (all connexions maximal)
best total agreement



(d) support over data ball x budget
connexion budget r
data radius (TV per window)
median sampling move
95% sampling move
contextual
remainder



(e) level-two fibre along a path
weight (clipped; diverges at the walls)
path parameter t (mixture → outside)
R>=0 (mixture)
R>=0 off box
R (signed)
C (complex pair)
Re w1
|Im w|



(f) level-two robustness of a hypothesis
share of tables in the ball
data radius (TV)
wall distance
R>=0 (mixture)
R>=0 off box
R (signed)
C (complex)
