(a) V is a morphism on each chamber;
on the wall + is not preserved

s on the pair line P + sχ (stealth range)
U_T
U_P
V = max(U_T, U_P)
wall s = 0.001:
DV(χ) + DV(−χ) = |ℓ(χ)| = 1
(b) (A, A) ∈ T_2V completes to T^2V iff the class
vanishes: only on the quadric cone, at two coincidences
‖[H(A, A)]‖ in coker J
