Entropy brane over the fibre
welfare × cities, X
1985
2004
2024
horizontal axis = conormal brane
circle = intersection (product)
square = observed
dH along the fibre
coupling t = α11 on the fibre
Distance from the intersection point
welfare × cities (X)
crime × drugs (X)
health × education (X)
I = DKL(observed ‖ max-ent), bits
Steepness of the intersection
largest Fisher eigenvalue on the fibre
