development (300): what the data identify, what they leave open, and how decisions respond
300 development tables, 9 contexts (sources vary)
flag and pool leave-one-out test; elastic attribution
fibre J Thm 64: dim 9 Prop 95: Fisher kernel
hypothesis 3 paths, union; projection ladder
decision Thm 148: open Thm 92: VOI range
selection (coupling) Thms 23, 27: leximin, toric limit; walls
composition Thms 45, 65: maximum entropy commutes, leximin does not
history Thm 146: trace in H_D + F_MRY; Thm 148: reachable slice
protection Thm 122: rho_q vs 2 eta; coalition evades a small inspection
holdout (100): value of information, calibration, contextuality
100 holdout tables {M,C,R,Y}: dim 9 → 6, VOI fixed {M,Y}: inspection {M,R,Y}, {M,H,Y}: calibration
cycle of four instruments fibre: Thm 77, Prop 78 (twist) Prop 137: imprecise, not contextual noncontextual fraction
three layers kept apart (Rem 70) sheaf: supports, global sections fibre: global law or not cocycle: entropy, system independence
